

# **Validating a Simulex Model**

---

**Brian Thompson, P.E.  
AEGIS Engineering**

# Considerations

---

- **Evacuation conditions**
- **Validation of software**
- **Simulex algorithm**
- **Selection of occupants**
- **Construction of geometry**
- **In practice**

# Evacuation Conditions

---

# Simulation Parameters

---

- **Occupants accounted for**
- **Environmental conditions**
- **Movement characteristics**

# Occupant Accounting

---

- **Partial Evacuation**
- **Full Evacuation**

# Model Environment

---

- **Smoke-free**
- **Accumulating smoke layer**
- **Near tenability threshold**

# State-of-Mind

---

- **Laissez-faire/flippant**
- **Intentional/reasoned**
- **Frightened/panicked**

# **Validation of Software**

---

# Partial Behavioral

---

- **Rates of body twist**
- **Acceleration/deceleration**
- **Speed fluctuations**
- **Inter-person distance**

# Validation Tests

---

- **Department stores**
- **Office buildings**
- **Lecture theatres**
- **Sports stadia egress areas**
- **University buildings**
- **Mock-up building geometries**

# Lecture Theatre

---

- **1-story + intermediate floor**
- **278 occupants**
- **Simulex travel time: 93 sec.**
- **Actual travel time: 90 sec.**
- **IBC (93 x 1.5) = 140 sec.**

# Law School

---

- **5-story**
- **494 occupants**
- **Simulex travel time: 161 sec.**
- **Actual travel time: 170 sec.**
- **IBC (161 x 1.5) = 242 sec.**

# Business School

---

- **8-story**
- **716 occupants**
- **Simulex travel time: 178 sec.**
- **Actual travel time: 220 sec.**
- **IBC (178 x 1.5) = 267 sec.**

# **Simulex Algorithm**

---

# Operations

---

- **Evaluates building geometry**
- **Creates “distance map”**
- **Preset occupant population**
- **Occupants follow shortest path**

# Distance Map

- **Travel distance isolines**
- **Geometry gaps**

A low-angle, black and white photograph of a skyscraper, showing the grid-like pattern of windows and the building's structure against a light sky. The building is on the left side of the frame, extending towards the top left corner.

# Occupant Travel

---

- **Aligned with distance map**
- **Perpendicular to isolines**
- **Inability to get unstuck**

# Occupant Population

---

# Population Group

---

- **Body size variable**
- **Speed 0.8 - 1.7 m/s**

# Location

---

- **Boundary-free**
- **Distance map**

# Construction of Geometry

---

# **Building Geometry**

---

- **Refinement**
- **Alterations**
- **Iterative modifications**

# Refinement

---

- **Automatic**
- **Manual**

# Alterations

---

- **Aisle width**
- **Narrow gaps**

A low-angle, black and white photograph of a skyscraper, showing the grid-like pattern of windows and the building's structure extending towards the top of the frame. The image is slightly blurred, giving a sense of height and scale.

# **Iterative Modifications**

---

- **Remove impediments**
- **Modify distance map**

# Case Studies

---

# Sample Projects

---

- **Multi-purpose arena**
- **Theatre**

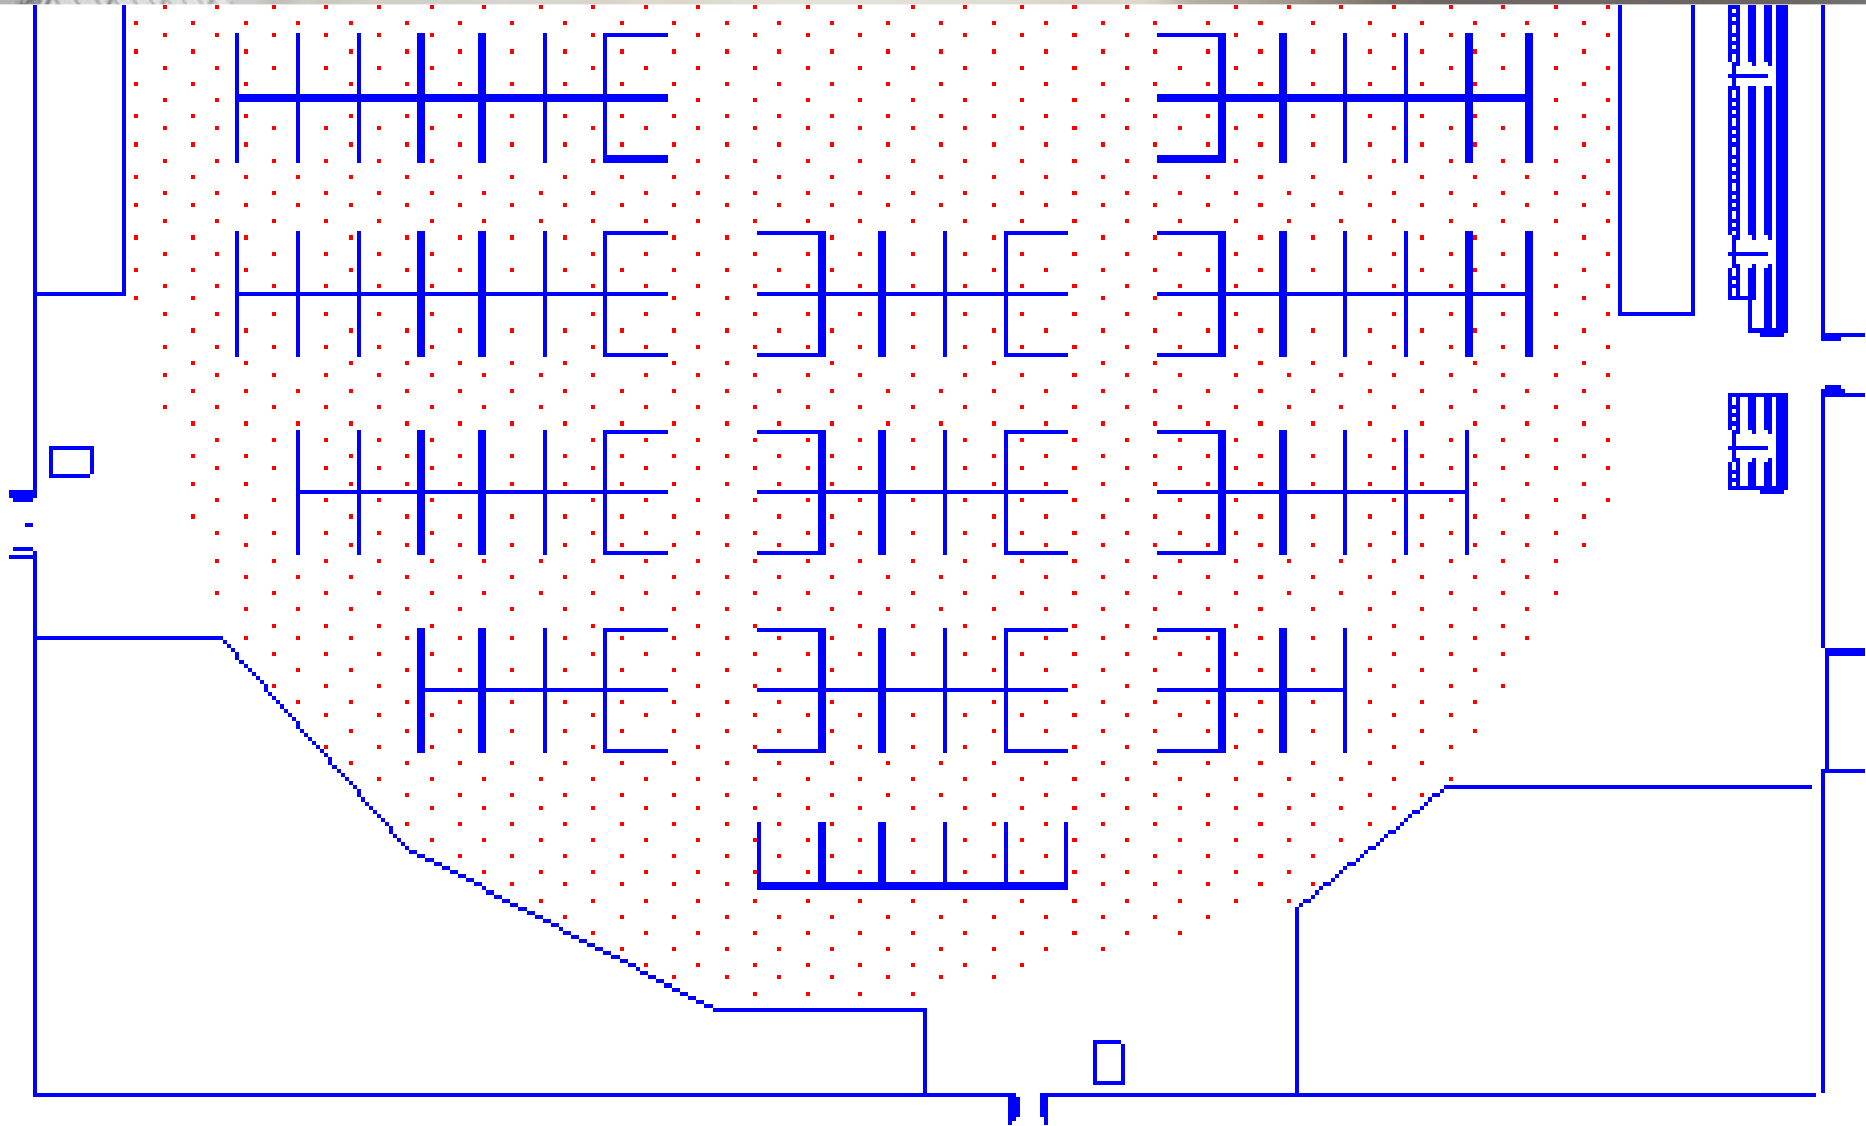

# Multi-Use Arena

---

- **Trade shows**
- **Sporting events**
- **Concerts**

# Trade Show

# Observations

---

- **Distributed population**
- **Generally free movement**

# Sporting Event

# Observations

---

- **Concentrated population**
- **Restricted movement**

# Grandstands

# Divide Rows

# Eliminate Gap

# Exit Distribution

# Engineering Judgment

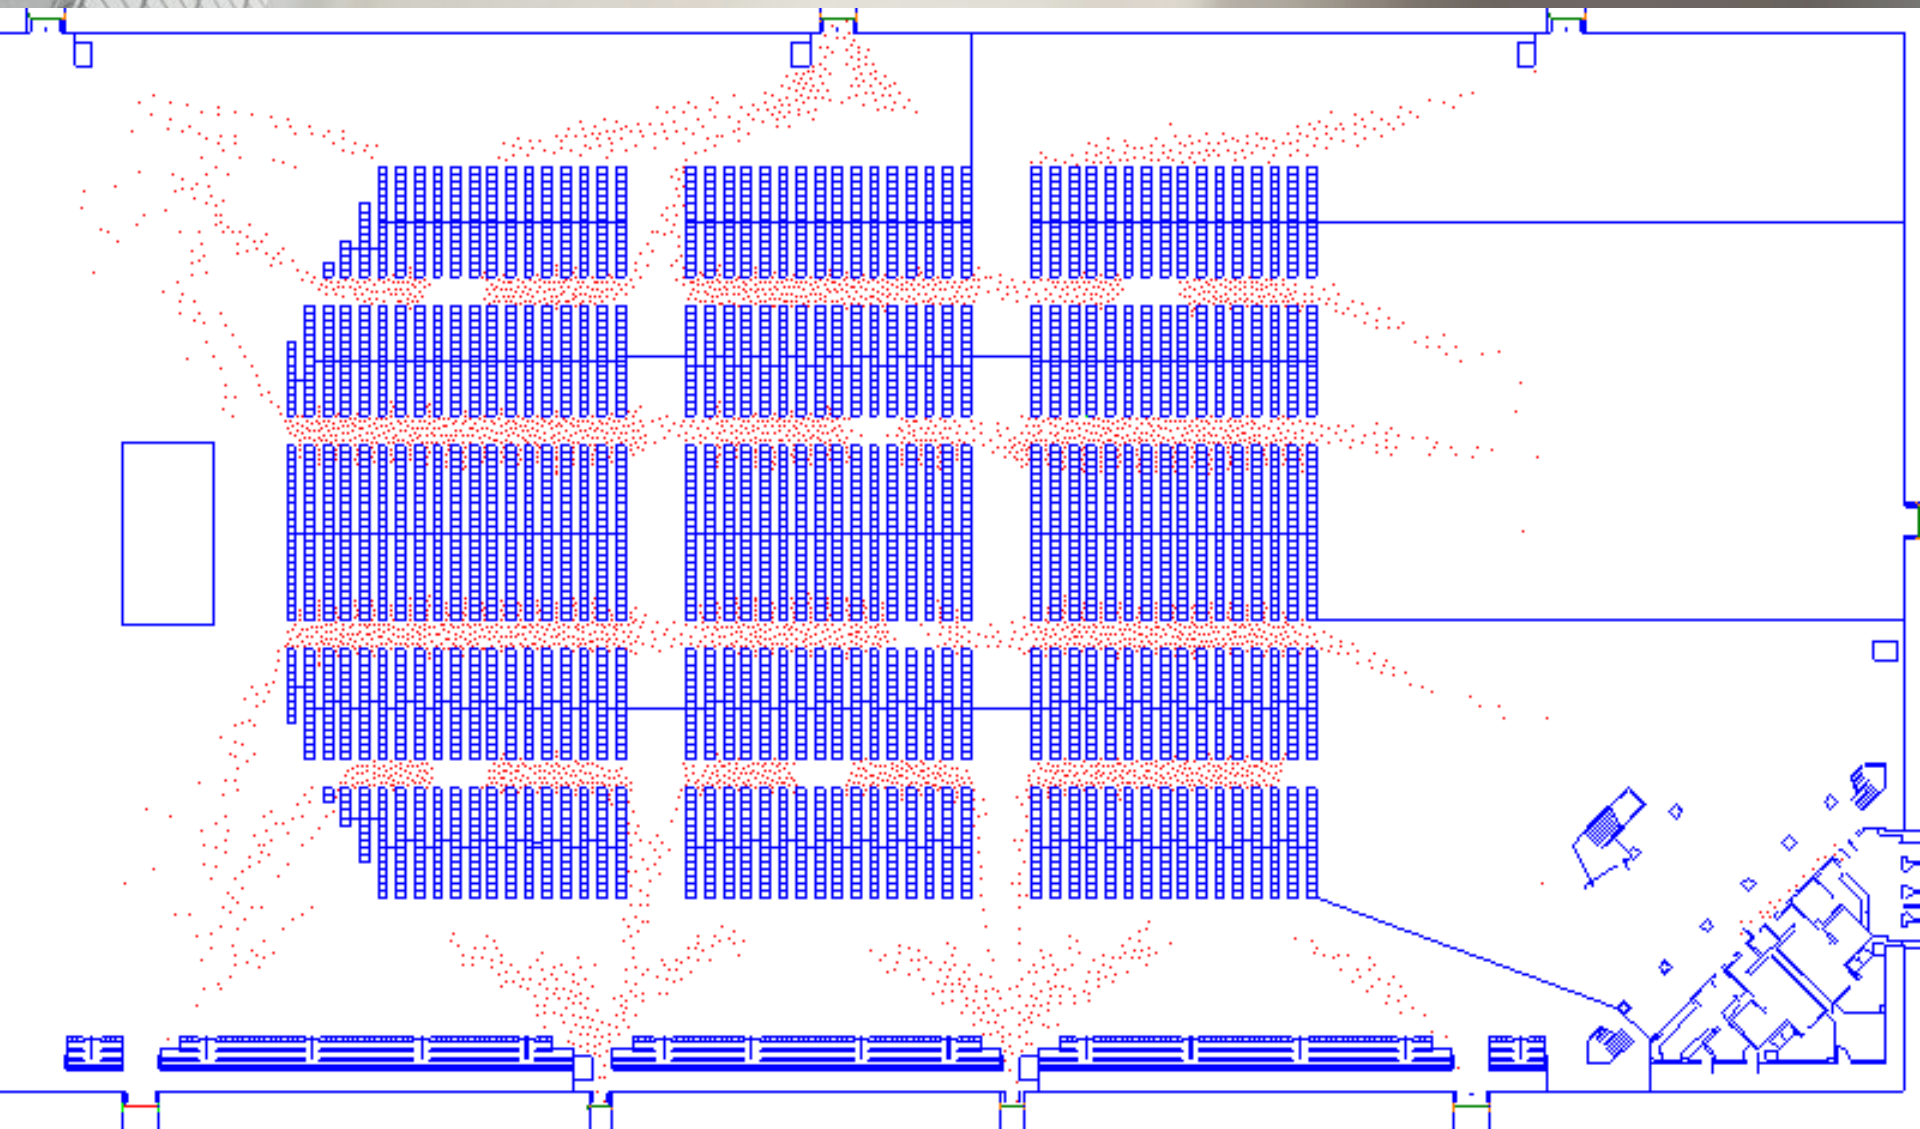

---

- **Reduce bleacher depth**
- **Limit travel in seating row**
- **Invert exit access**

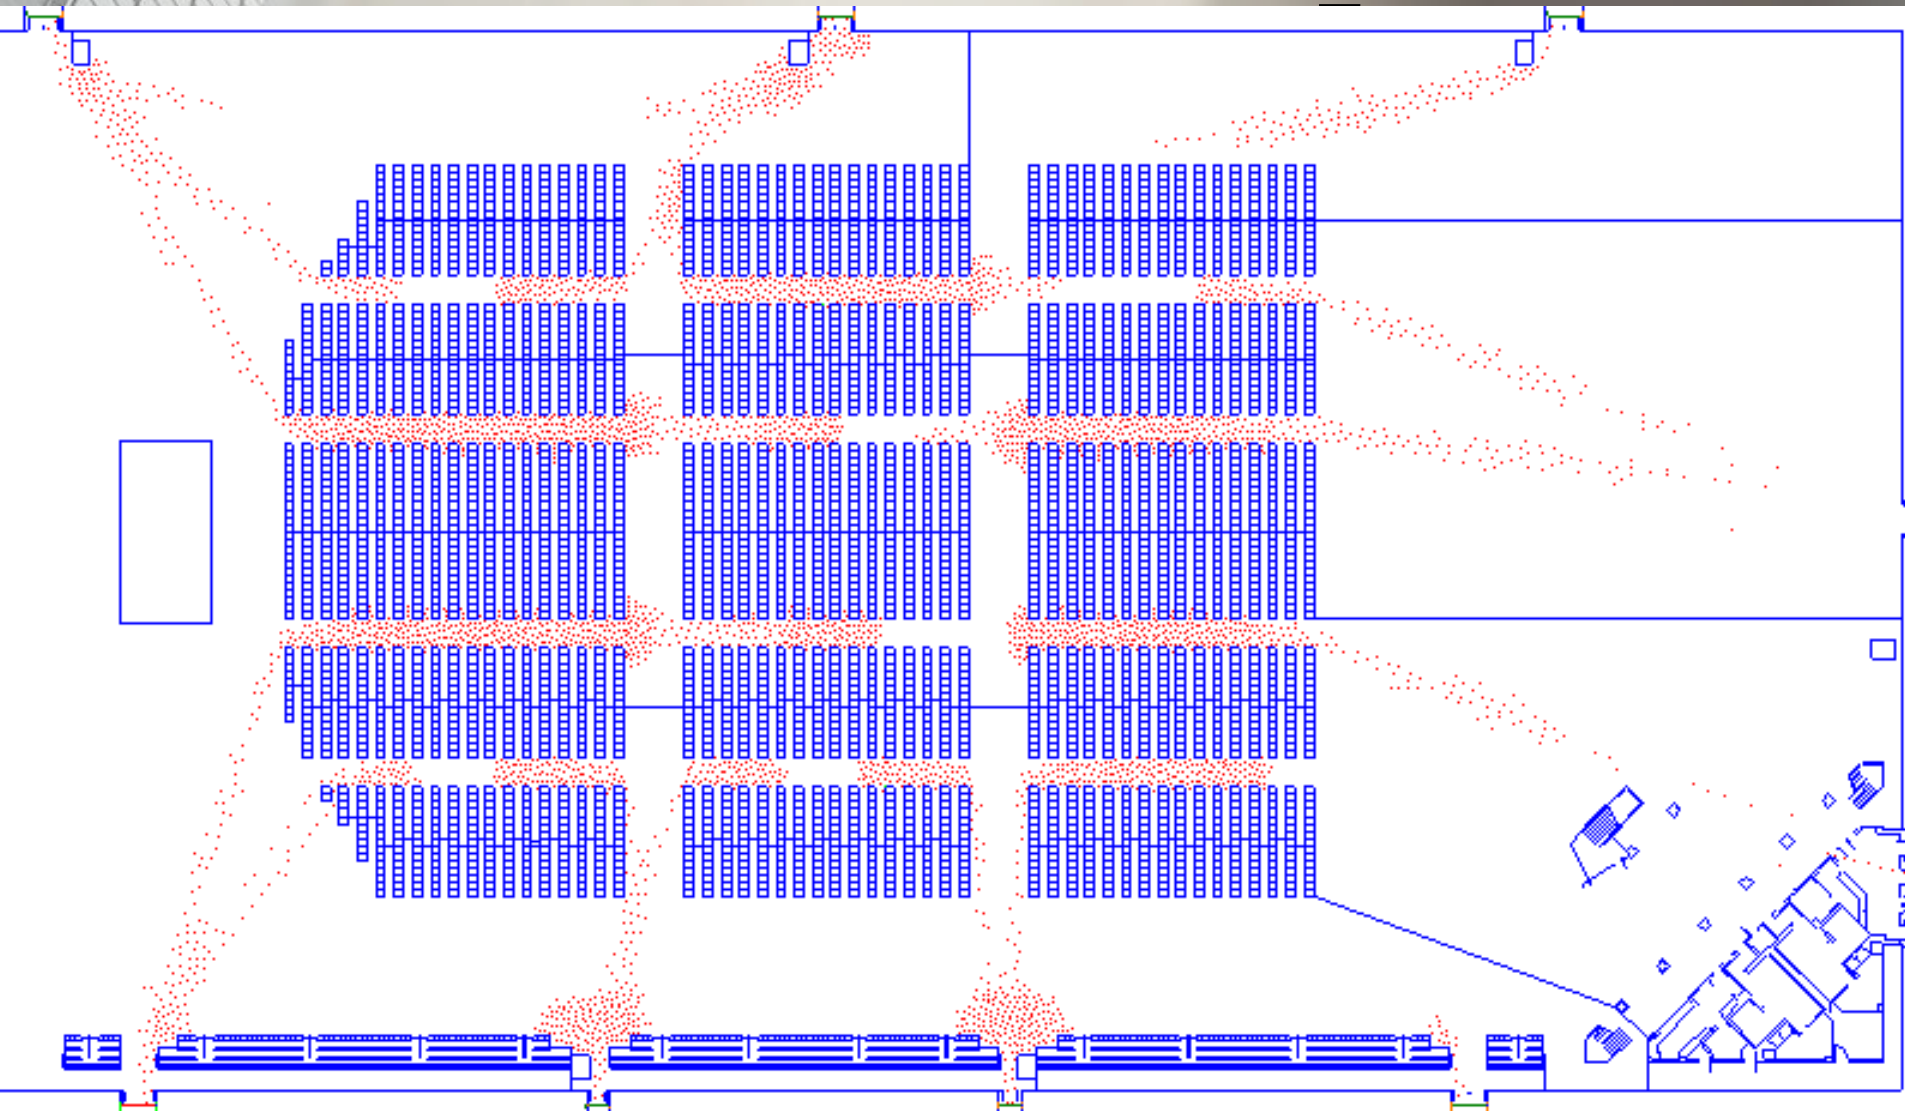

# Concert

# Time 0:15

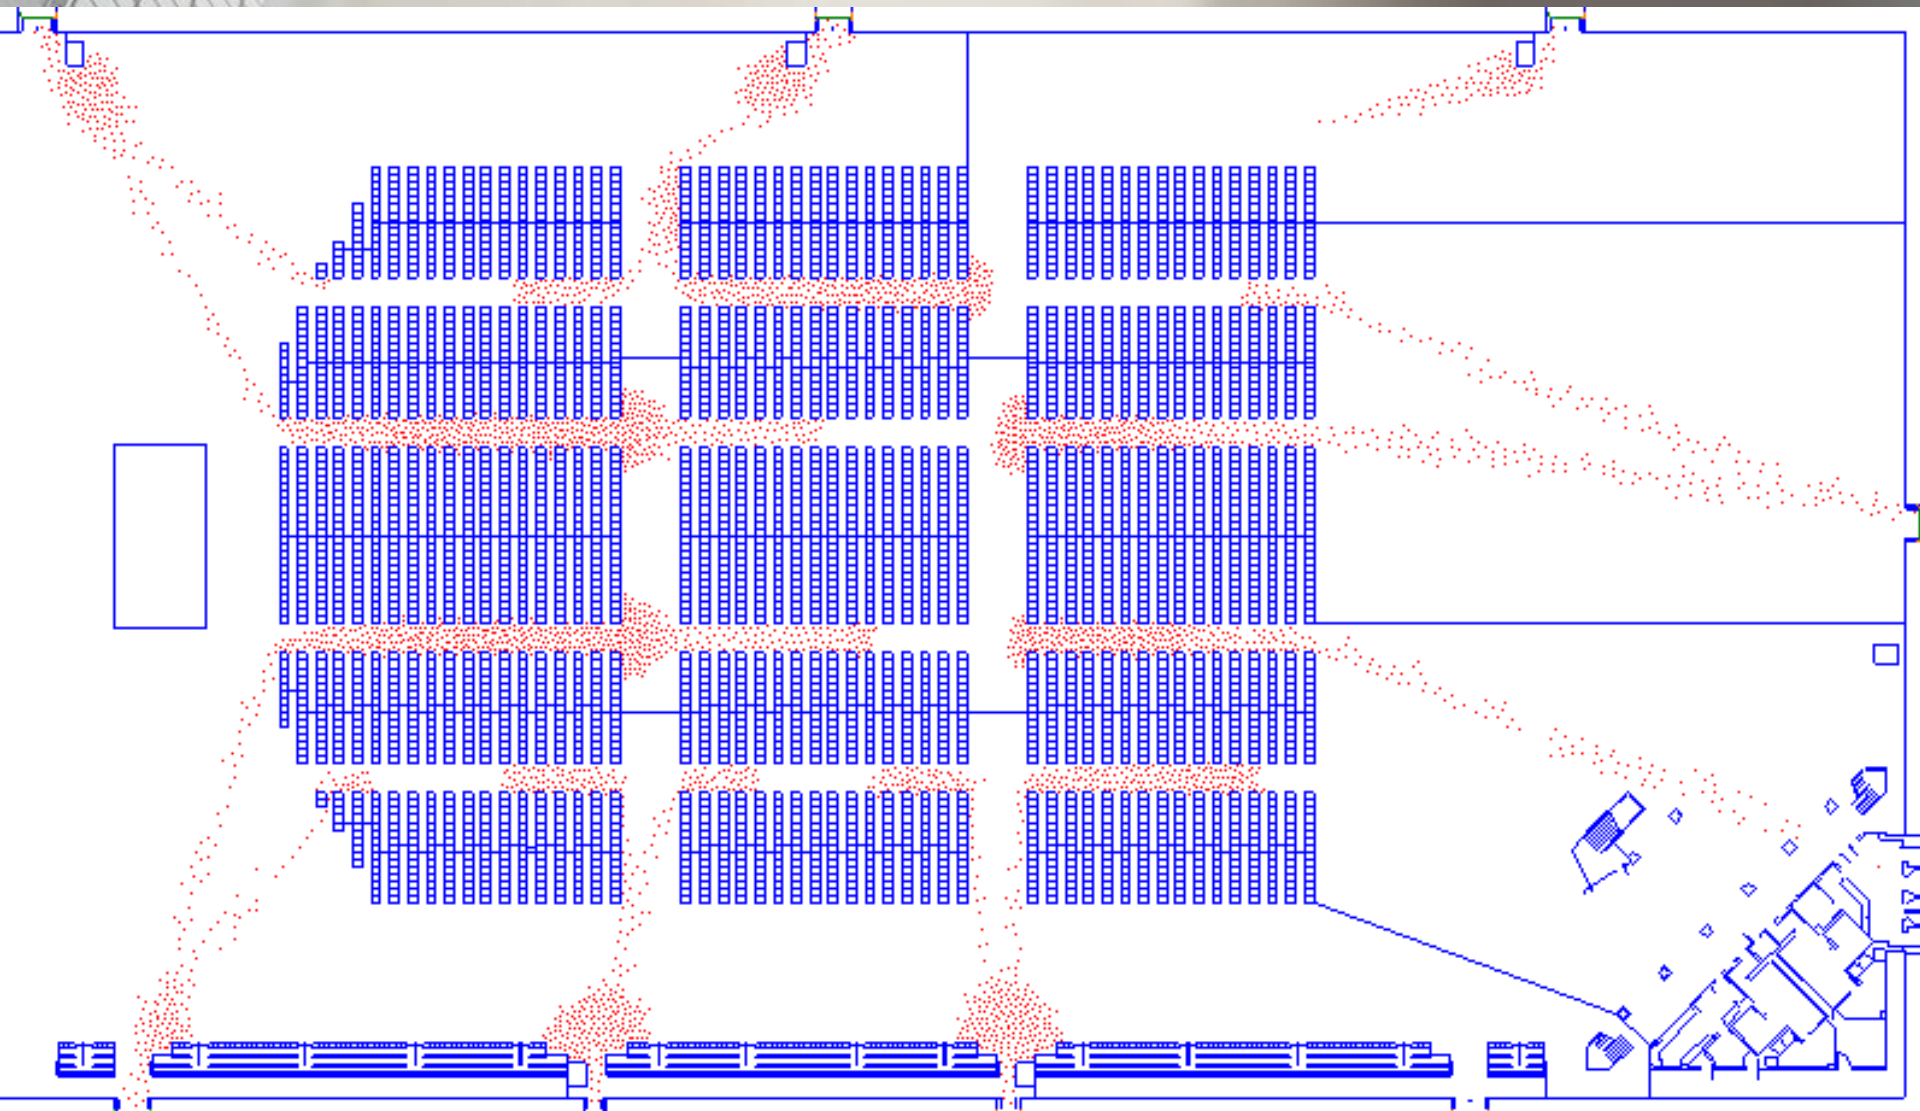

# Time 0:30

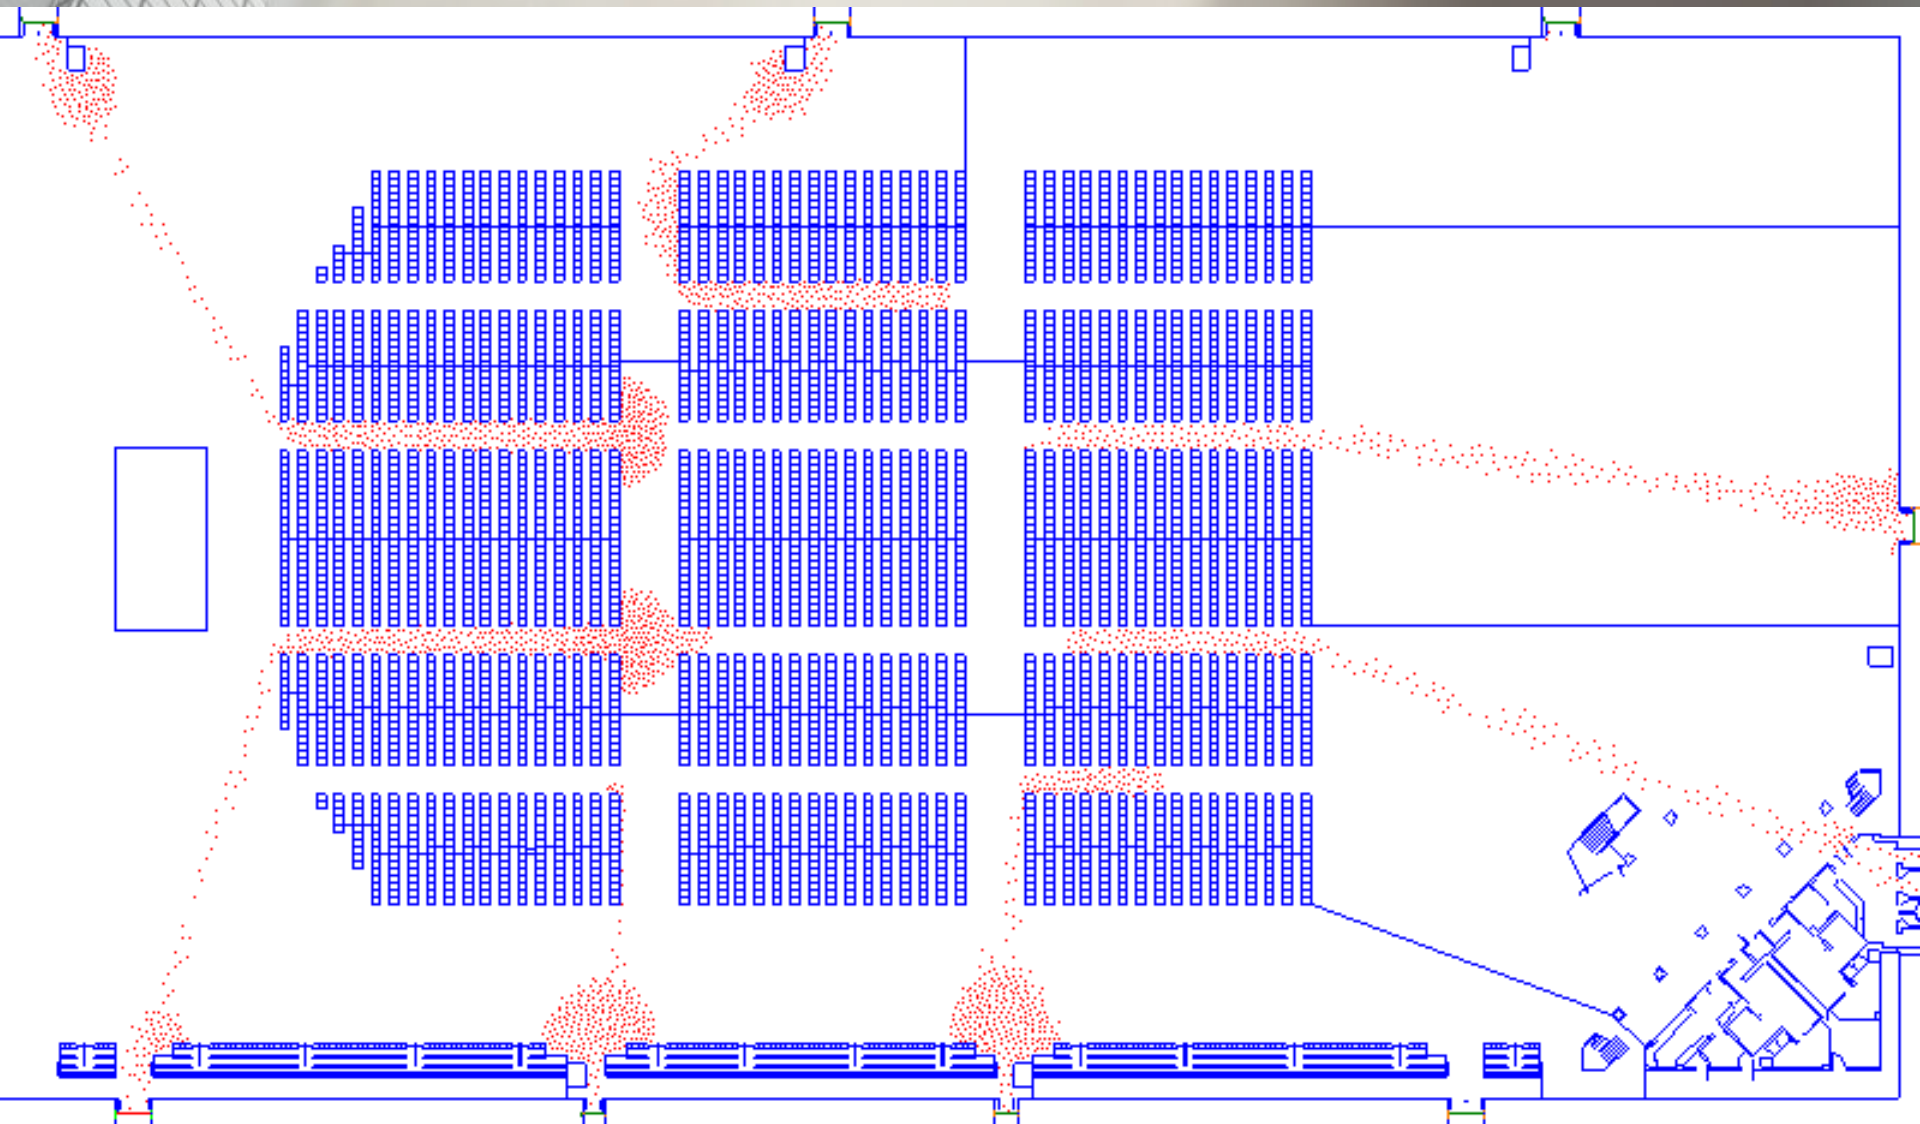

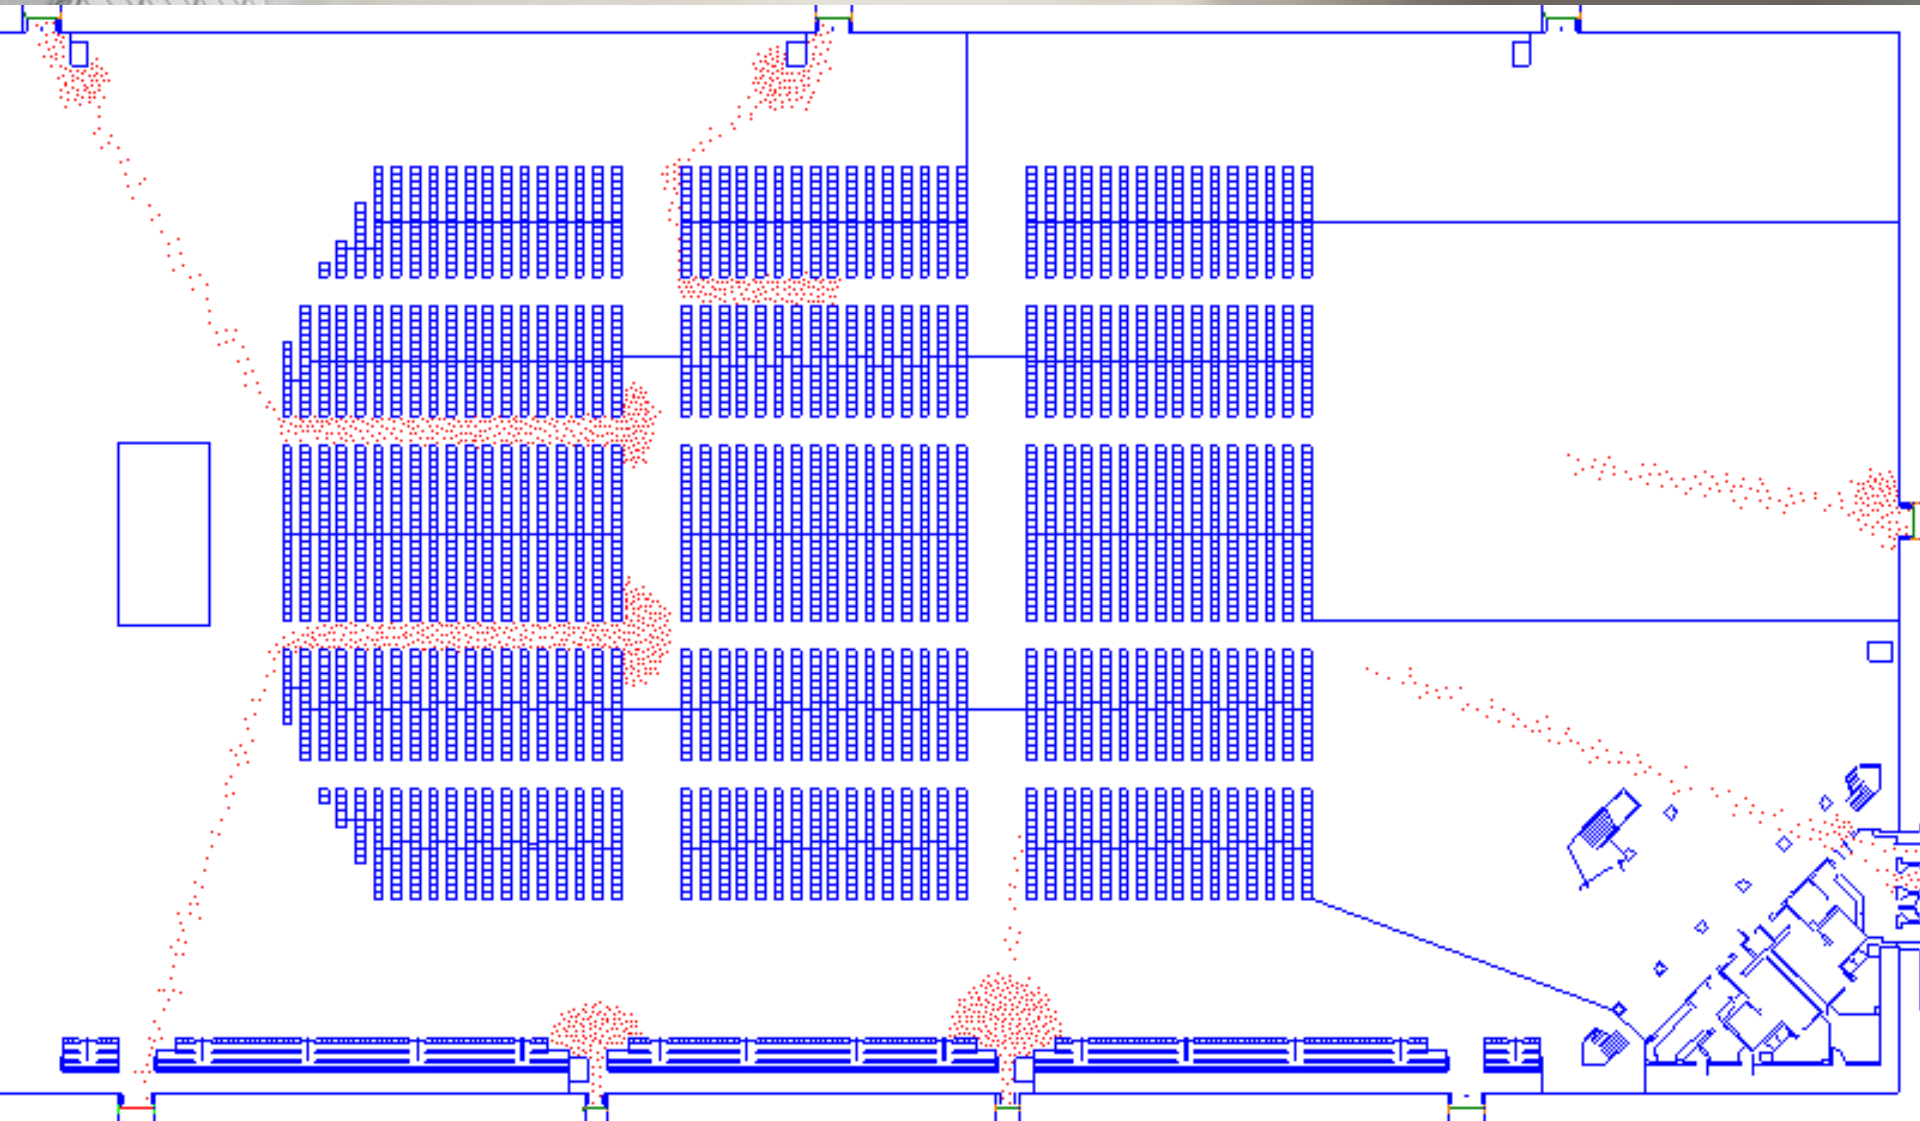

# Time 0:45

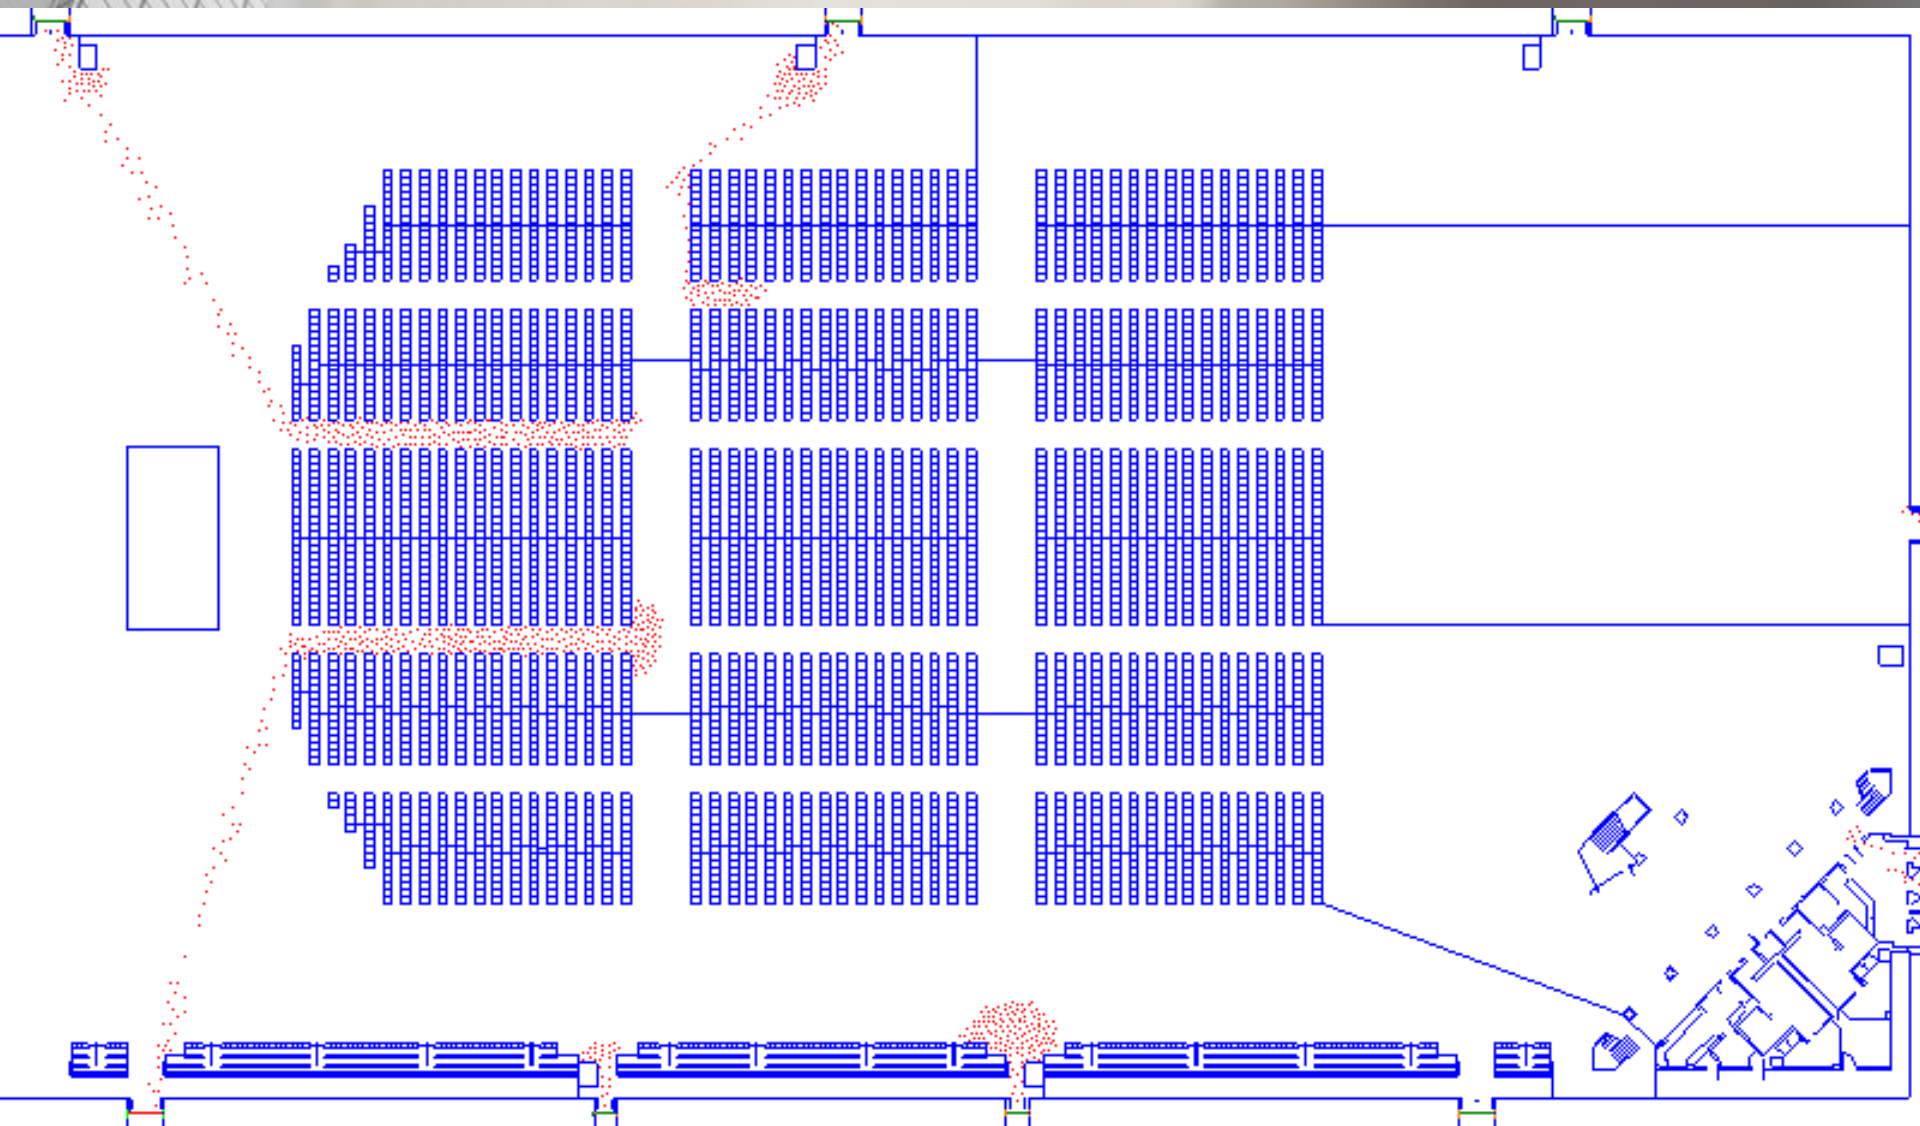

# Time 1:45

# Time 2:45

# Time 3:30

# Time 4:30

# Time 6:00

# Engineering Judgment

---

- **Limit travel within row**
- **Forced exit distribution**
- **Queuing vs. available exits**

# Tiered Theatre Seating

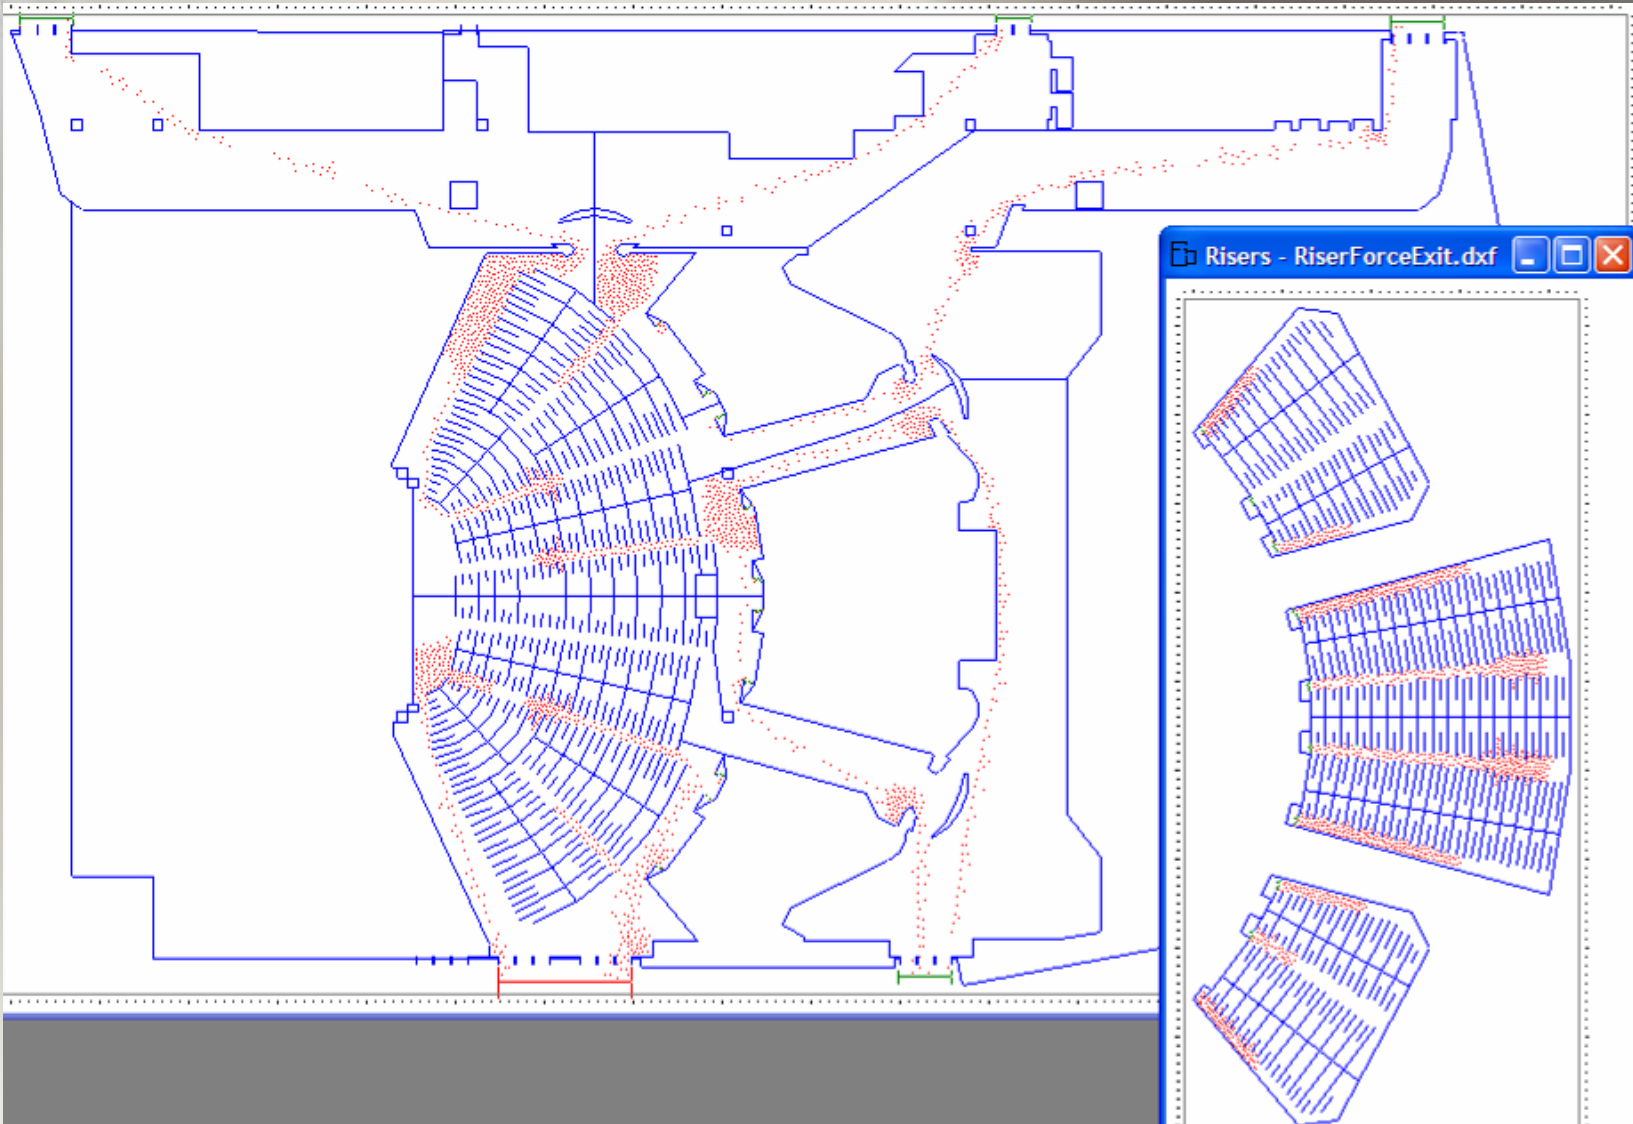

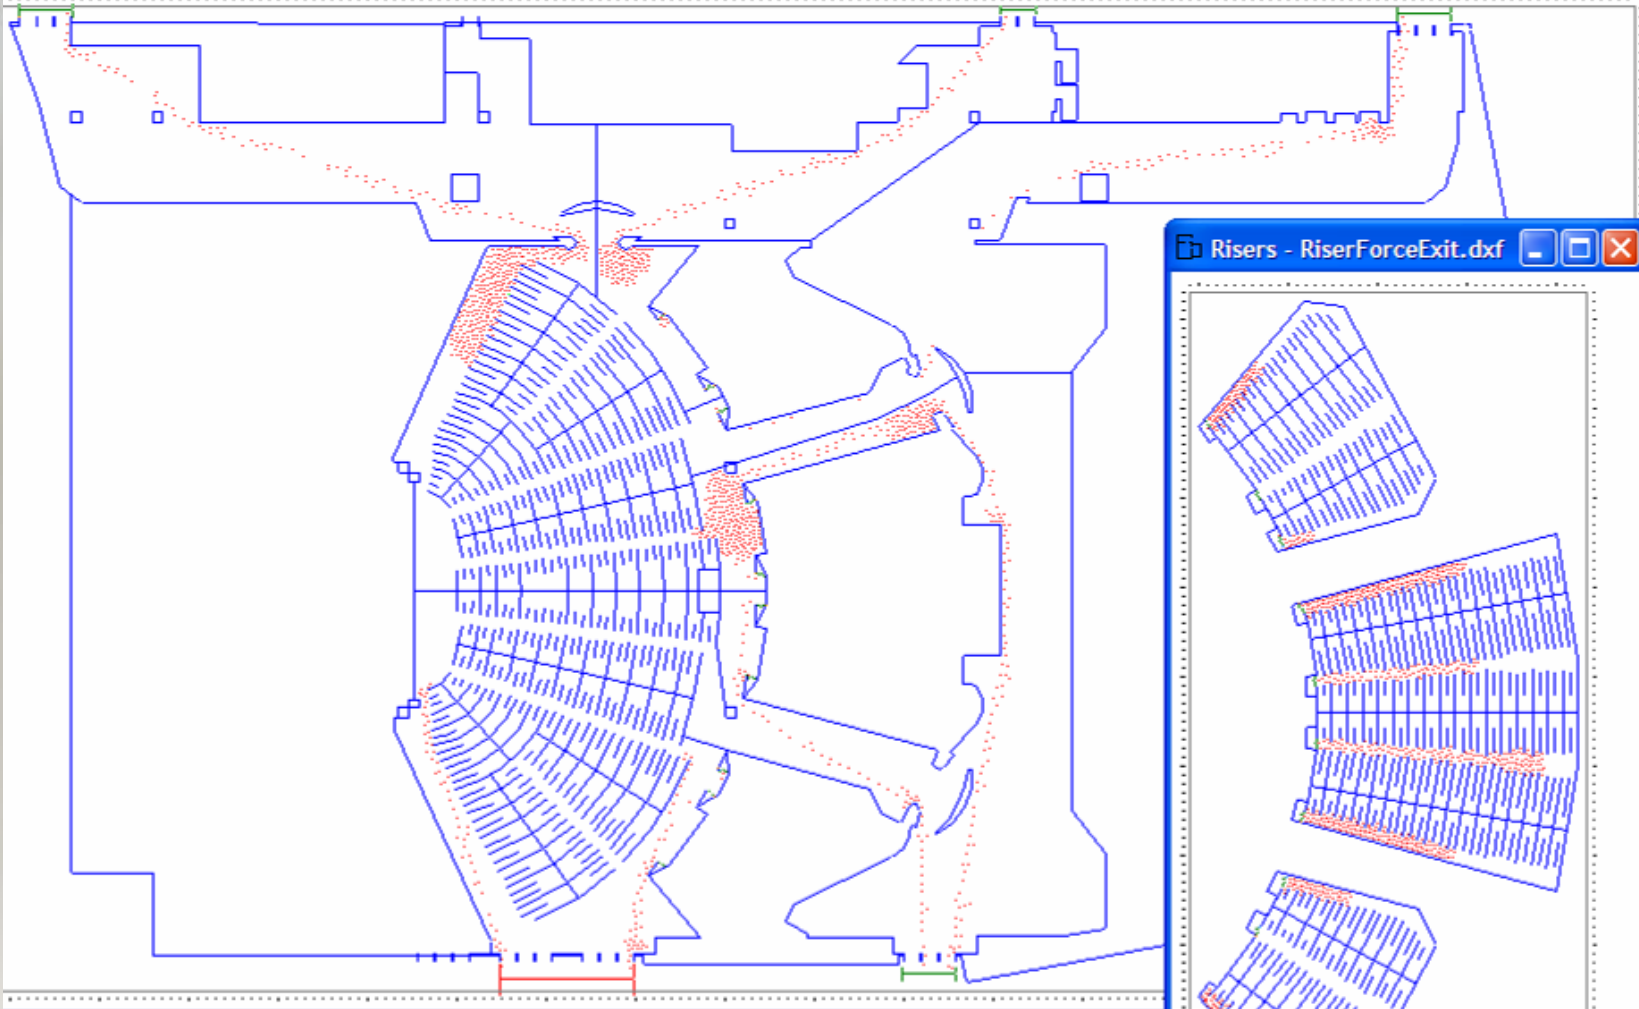

# Time 1:00

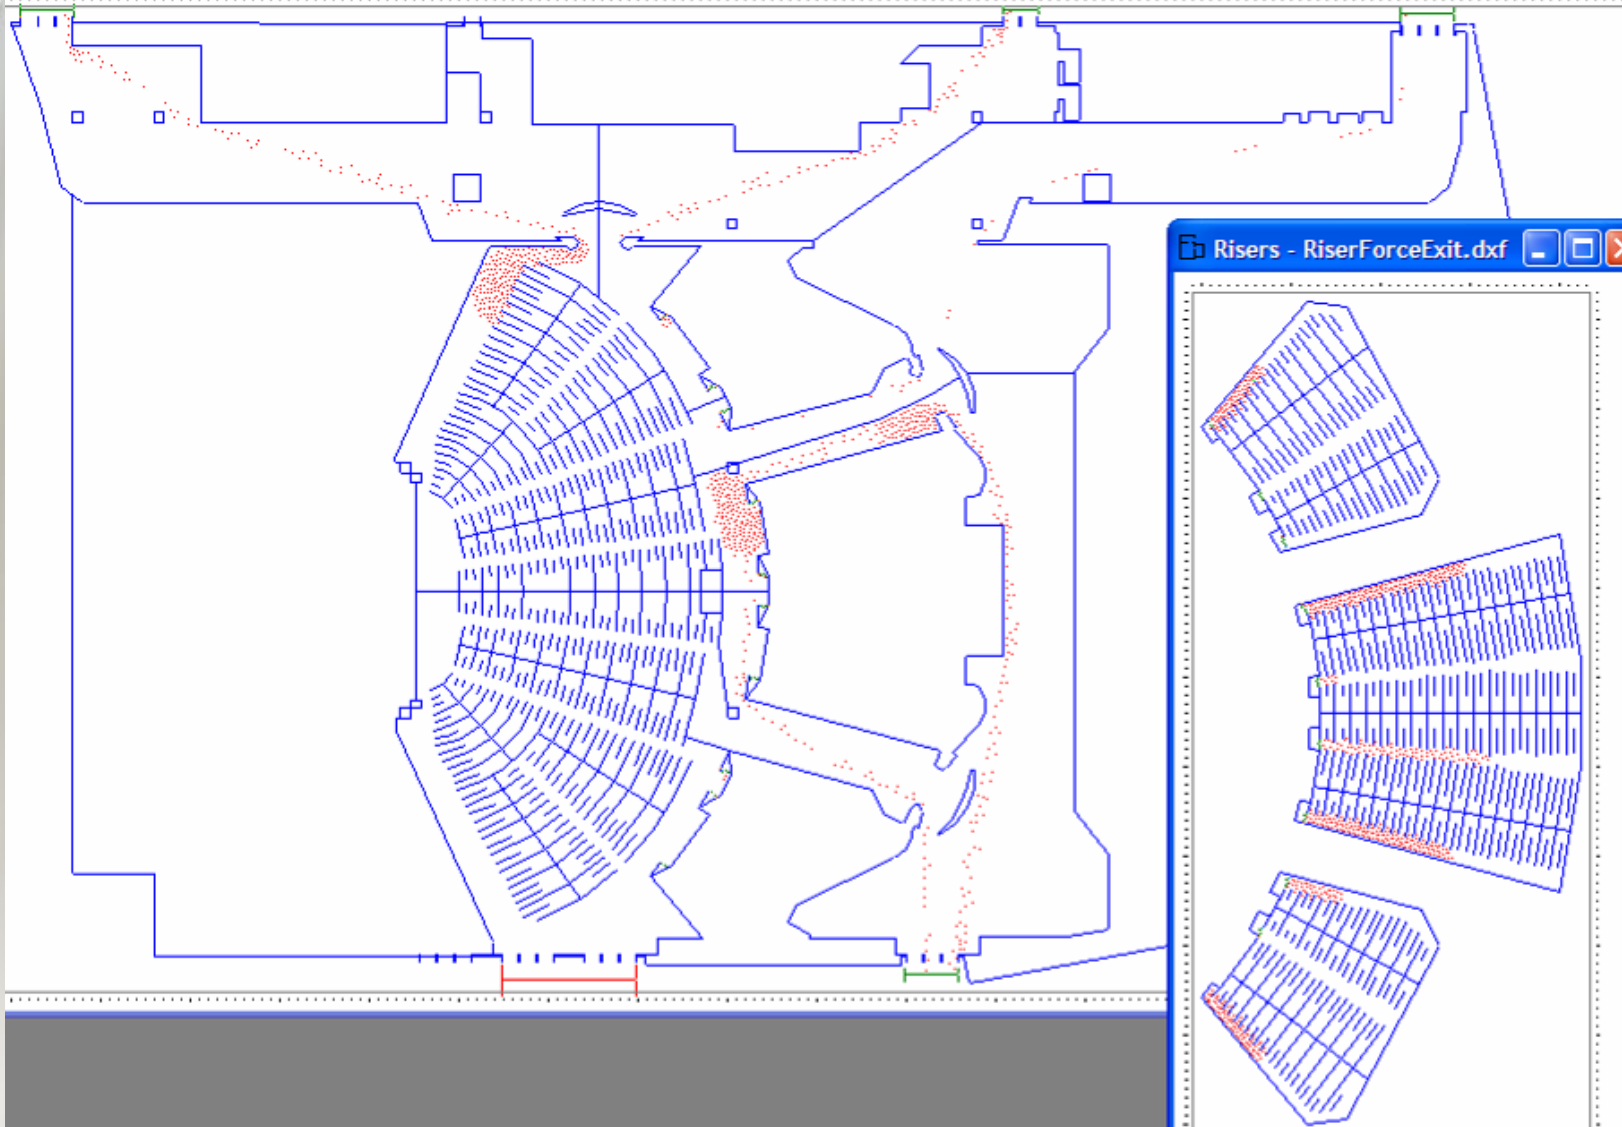

# Time 3:30

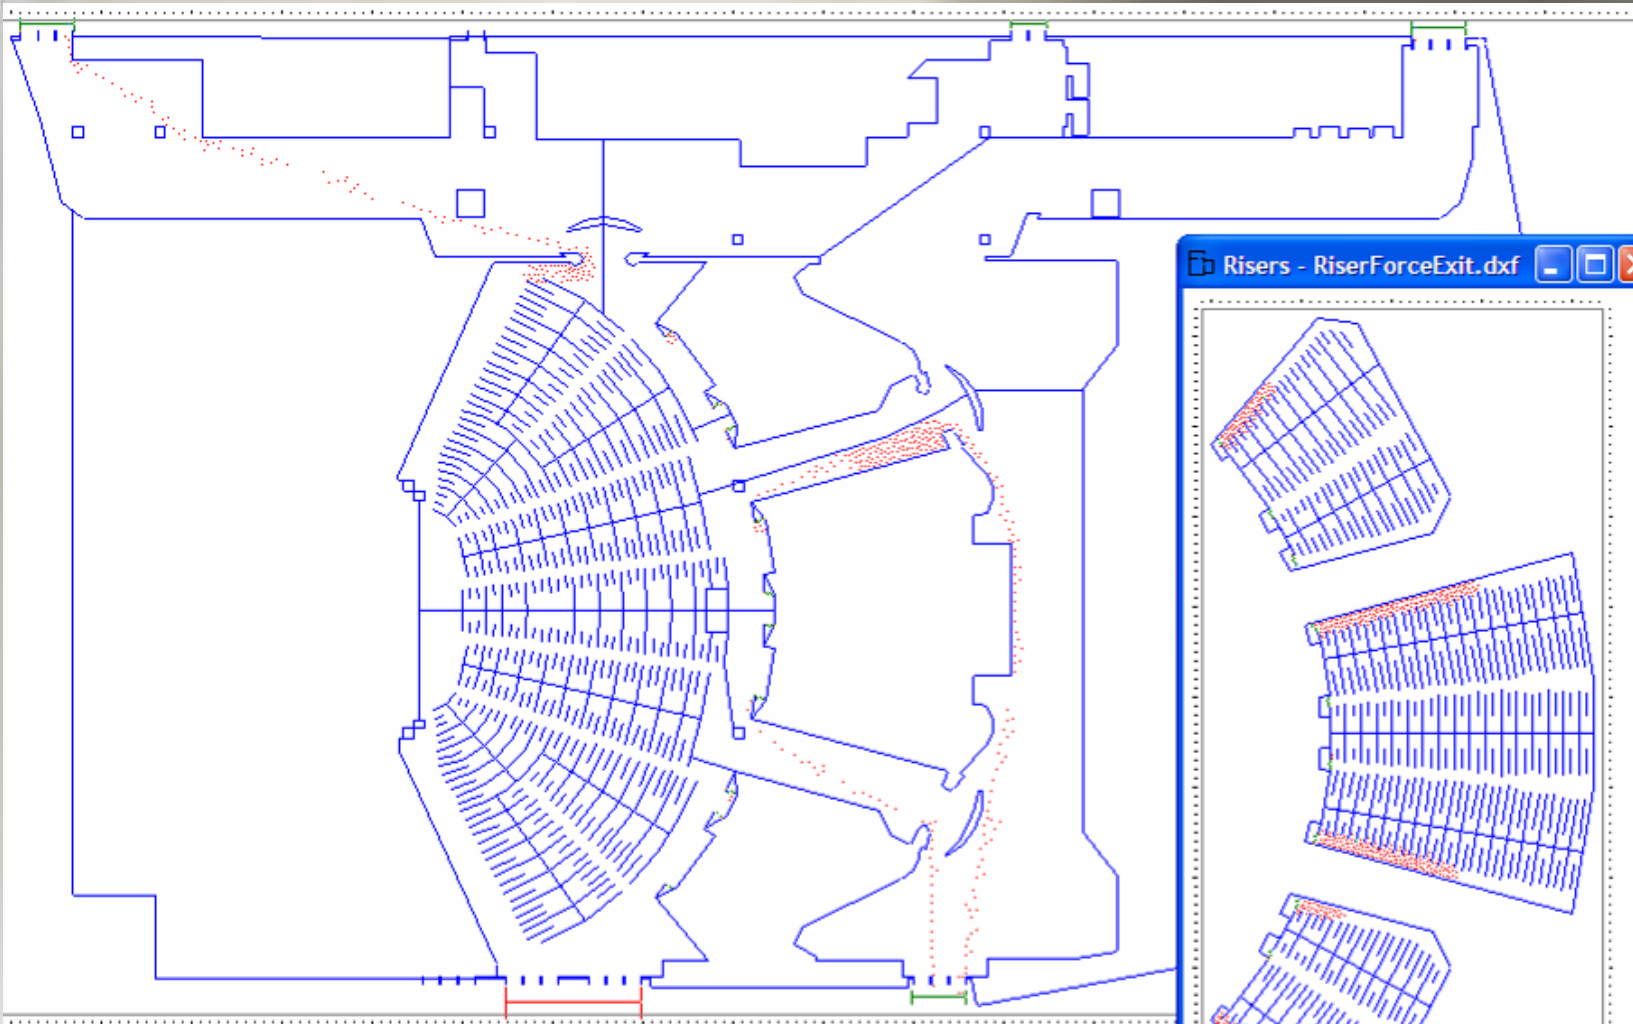

# Time 5:00

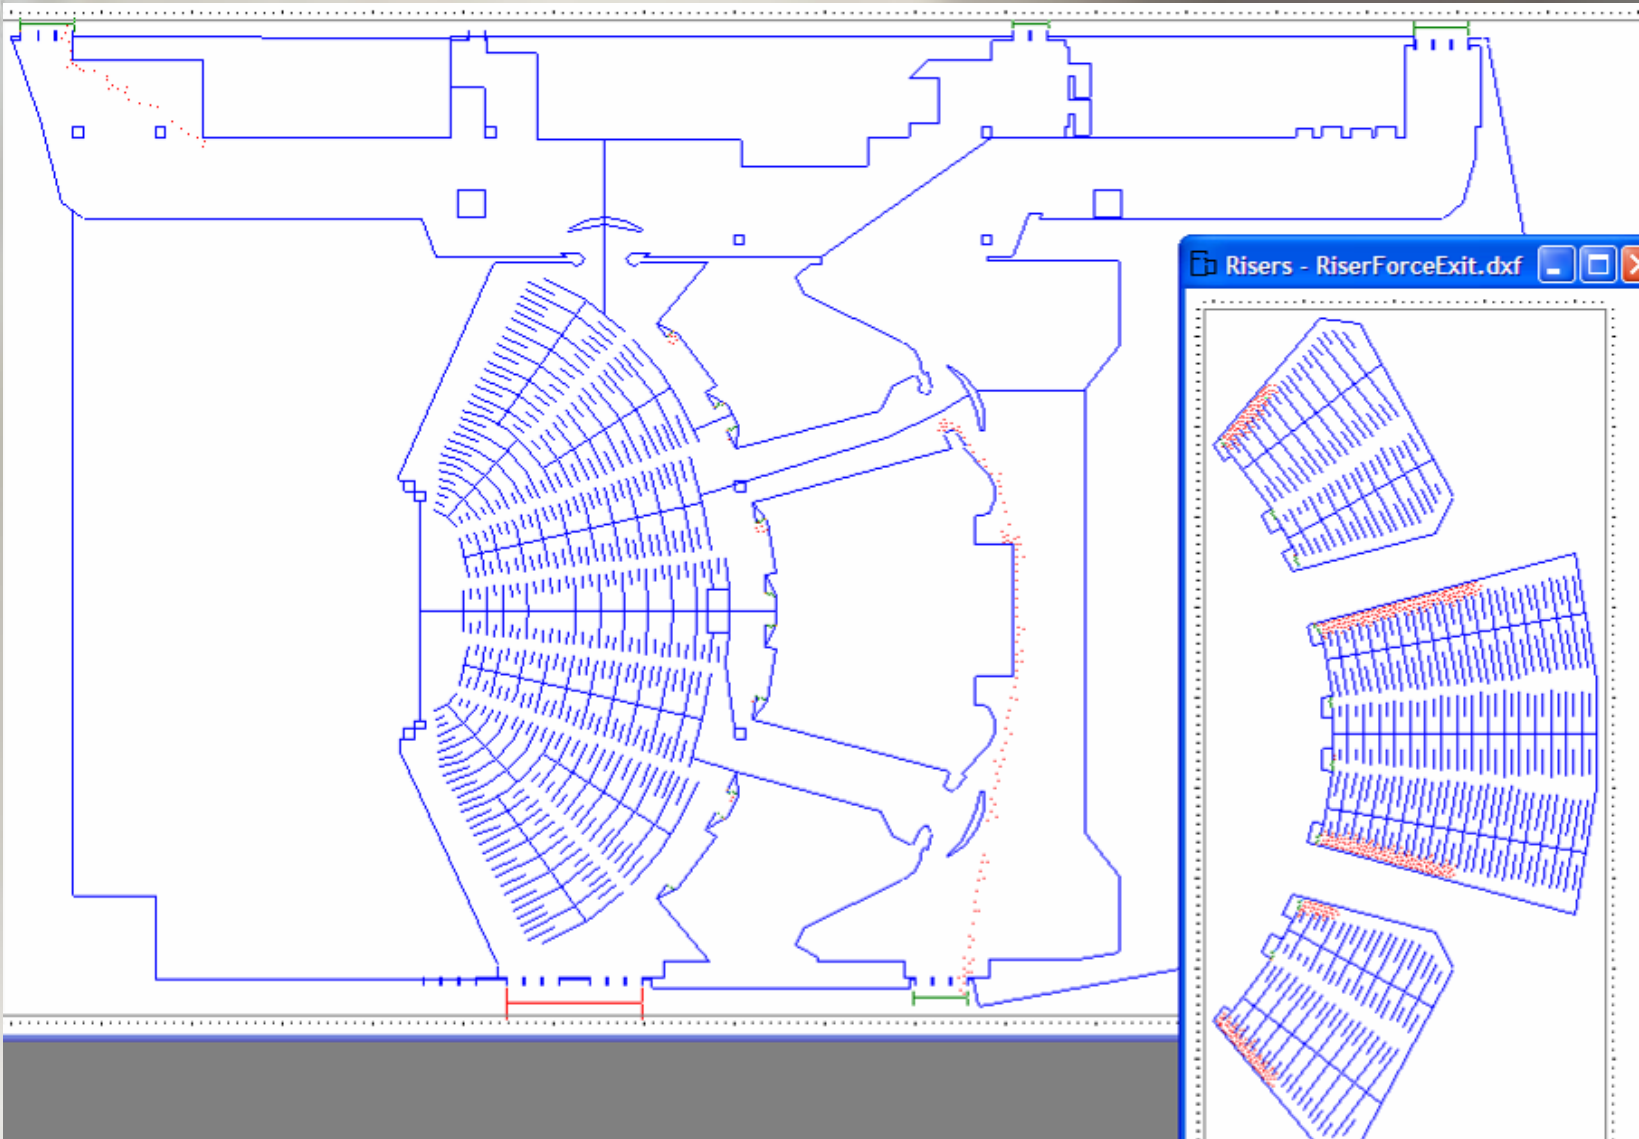

# Time 6:00

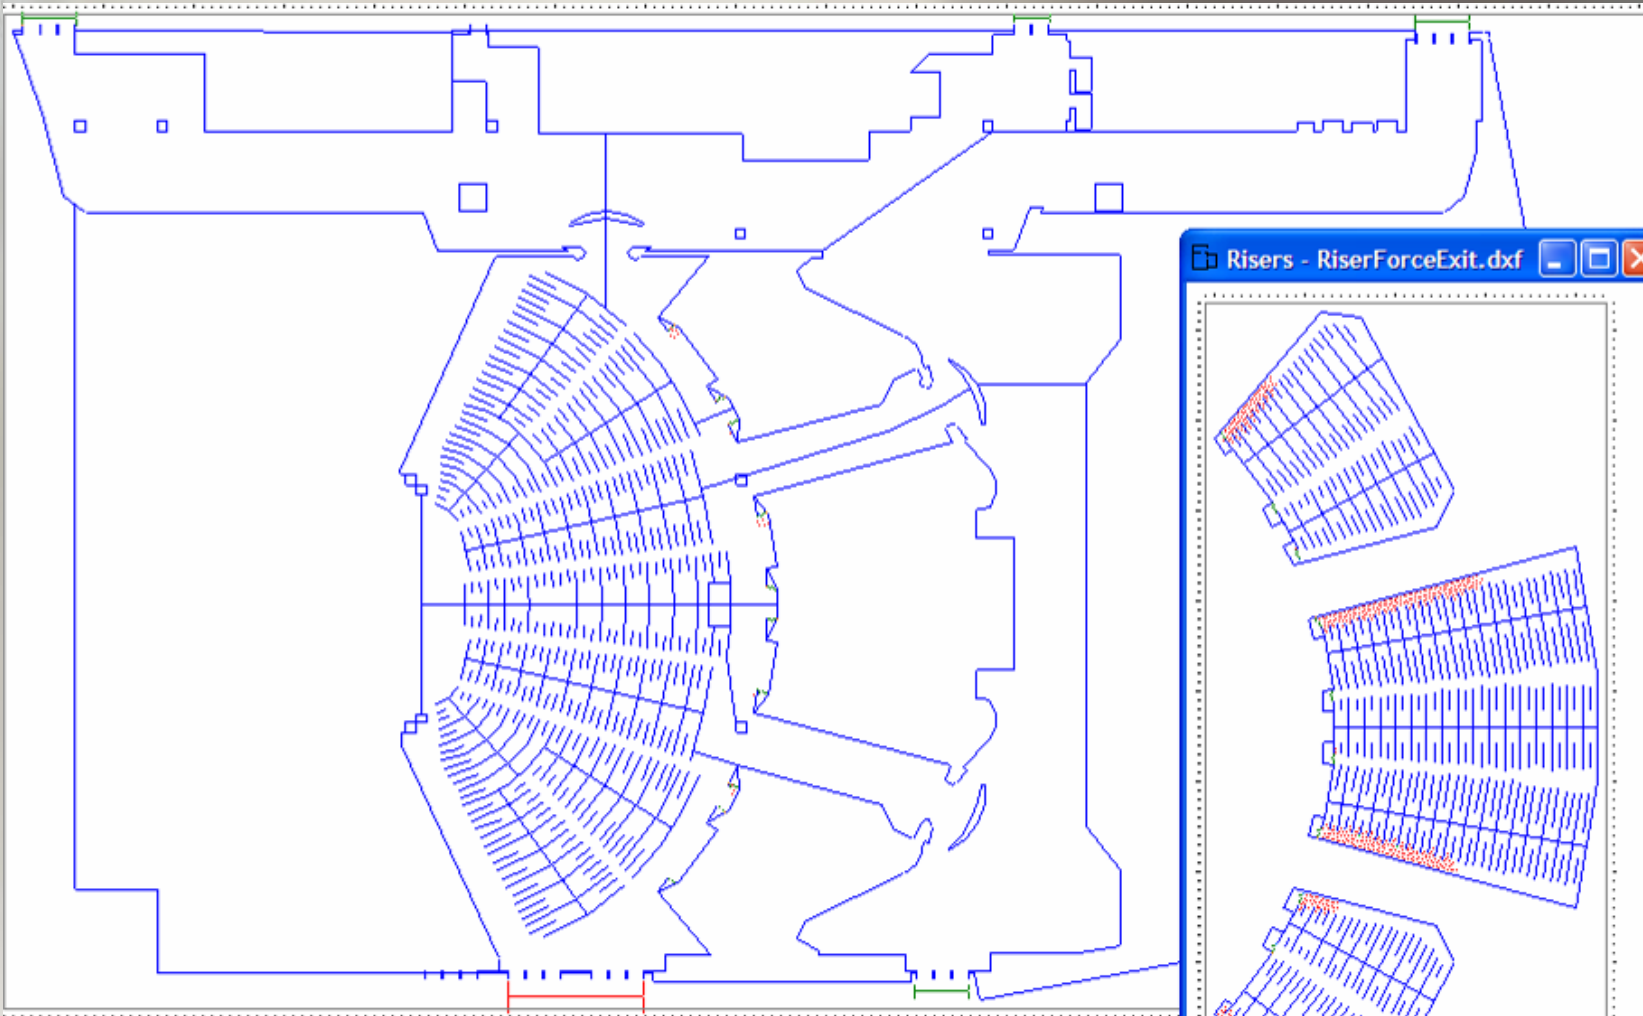

# Time 8:00

# Time 9:30

# Time 11:00

# Engineering Judgment

---

- **Deleted seat obstructions**
- **Limited travel within row**
- **Forced exit distribution**
- **Queuing vs. available exits**
- **Account for jams**

# Validation Factors

---

- **Comparable to test data**
- **Absence of panic**
- **Aisles equalize rows**
- **Queuing vs. exit availability**
- **Rational manipulations**

# Potential Refinement

---

- **Multi-story stairs**
- **Effects of pillar at exit**
- **Alter movement speed**
