Outline

- 1. Introduction**
- 2. Evacuation capabilities framework integrating persons with special needs**
- 3. Case study: assisted horizontal evacuation of a hospital ward**
- 4. PathFinder MonteCarlo simulation results**
- 5. Conclusion and future research topics**

1

Persons with special needs assisted by fire brigades in Italy

Total number of people with special needs assisted by ff's in 2016 in Italy: 23.625 (65 #/day)
Total number of persons assisted by ff's in 2016 in Italy: 74.122 (203 #/day)

Disabilities classification

Table 1: Disabilities classification derived from NFPA DARAC Guide (2016).

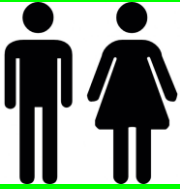

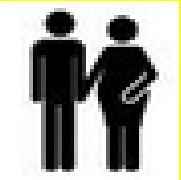

General category		Examples of mobility devices required
Mobility	<i>Ambulatory mobility</i>	Canes, crutches, walkers
	<i>Wheelchair users</i>	Power-driven or manually operated wheelchair
	<i>Respiratory</i>	Depending on the case
<i>Blind or Low vision</i>		Canes, service animals.
<i>Deaf or Hard of hearing</i>		
<i>Speech disabilities</i>		
<i>Cognitive disabilities</i>		Depending on the case
<i>Temporary disabilities</i>		Depending on the case

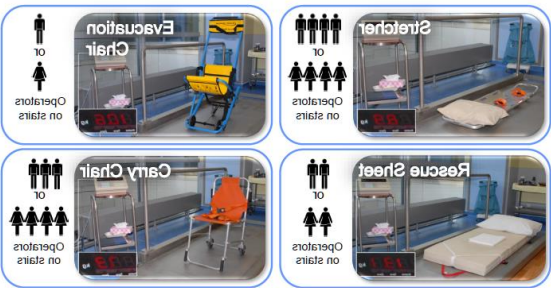

Establish a link with the assisted: meta-communication

Occupants evacuation capabilities framework

MOBILITY AND WAY FINDING CAPABILITIES	MOBILITY DEVICES	STAFF/EMERGENCY RESPONSE ASSISTANCE	REMARKS AND EXAMPLES
1. Autonomous 			<ul style="list-style-type: none"> • Staff/Emergency response teams • Walking patients (priority classif. level 4) • Visitors, occupants Full way finding capability and ability to independently walk on even and uneven surfaces and negotiate stairs
2. Autonomous with mobility devices 	Canes, crutches, walkers, rollators, wheelchairs		<ul style="list-style-type: none"> • Temporary or permanent disabilities Full way finding capability. <i>Type a):</i> move/walk independently through an horizontal accessible route <i>Type b):</i> with the use of a mobility device may also be able to negotiate stairs without supervision
3. Autonomous requiring assistance in way finding 		1 or 2 staff operators for each autonomous walking occupant	<ul style="list-style-type: none"> • Blind or Low vision persons • Cognitive disabilities • Children • Deaf or Hard of hearing (only to be notified) • Walking patients (priority classif. level 3) Able to walk on even and uneven surfaces and negotiate stairs only with the assistance of another person

Occupants evacuation capabilities framework

MOBILITY AND WAY FINDING CAPABILITIES	MOBILITY DEVICE	STAFF/EMERGENCY RESPONSE ASSISTANCE	REMARKS AND EXAMPLES
<p>4. Not autonomous - Major mobility devices required</p>  <p>Hunt (2016)</p> 	<p>Wheelchair stretcher, rescue sheet, emergency stair travel device</p>	<p>1 to 4 operators for each assisted person</p>	<ul style="list-style-type: none"> Not autonomous patients (priority classif. level 2) <ul style="list-style-type: none"> <i>Type a</i>): transferrable only on a wheelchair, a stretcher or a rescue sheet through an accessible route (for relocation on the same floor) <i>Type b</i>): transferrable on stairs with emergency travel devices or by means of a firefighter lift (i.e. complying with EN 81-72:2015, clause 5.2.4) accessible for a wheelchair or stretcher (i.e. types 3 to 5 according to EN 81-70:2018)
<p>5. Not autonomous – Transferrable only with beds or incubators</p> 	<p>Bed, incubator</p>	<p>1 or 2 operators for each assisted person</p>	<ul style="list-style-type: none"> Critical patients (priority classification level 1) <ul style="list-style-type: none"> <i>Type a</i>): transferrable only on a bed or incubator through an accessible route (for relocation on the same floor) <i>Type b</i>): transferrable on stairs only by means of a firefighter lift (i.e. complying with EN 81-72:2015, clause 5.2.4) with adequate accessibility (i.e. type 5 according to EN 81-70:2018)

Basic *autonomous* occupant profiles

Autonomous occupant profile	Unhindered walking speed (m/s) (on level terrain, straight-line movement)					Social grouping	Remarks
	Distribution law						
	Type	μ	σ	Min	Max		
Active staff	Normal Alonso and Ronchi (2016)	1.35	0.25	$\mu - 2.8\sigma$	$\mu + 2.8\sigma$	Individual or assistance team member	Familiar & Trained
Emergency response	Assumed equal to Active staff					Individual or assistance team member	Familiar & Trained
Visitor to in-patient (or generic autonomous occupant)	Normal Fruin (1987), Boyle (1999)	1.20	0.20	$\mu - 3.0\sigma$	$\mu + 3.0\sigma$	Individual or groups, eventually linked to one in-patient	Uncertain familiarity & Not Trained
Worker (not in charge of egress assistance)	Assumed equal to Visitor to in-patients					Individual or with co-workers	Familiar & Trained
Autonomous in-patient	Normal Boyle (1999)	0.95	0.32	$\mu - 2.2\sigma$	$\mu + 2.2\sigma$	Individual or linked to Visitors	Uncertain familiarity & Not Trained

Basic *autonomous mobility impaired* occupant profiles

<i>Autonomous mobility impaired</i> occupant profile		Unhindered walking speed (m/s) (on level terrain, straight-line movement)					Social grouping	Remarks
		Distribution law						
		Type	μ	σ	Min	Max		
Mobility device	Crutches	Normal Boyle (1999)	0.94	0.30	$\mu - 1.0\sigma$	$\mu + 1.4\sigma$	Individual or linked to visitors	Uncertain familiarity & Not Trained
	Walking stick	Normal Boyle (1999)	0.81	0.38	$\mu - 1.4\sigma$	$\mu + 2.0\sigma$	Individual or linked to visitors	Uncertain familiarity & Not Trained
	Rollator or walking frames	Normal Boyle (1999)	0.57	0.29	$\mu - 1.6\sigma$	$\mu + 1.6\sigma$	Individual or linked to visitors	Uncertain familiarity & Not Trained
	Electric wheelchair	Constant Boyle (1999)	0.89				Individual or linked to visitors	Uncertain familiarity & Not Trained
	Manual wheelchair	Normal Boyle (1999)	0.69	0.35	$\mu - 1.6\sigma$	$\mu + 1.9\sigma$	Individual or linked to visitors	Uncertain familiarity & Not Trained

Basic *assisted* occupant profiles

Assisted occupant profile	Assisted travel speed (m/s) (on level terrain, straight-line movement)					Active staff/ Emergency resp. assignment
	Distribution law					
	Type	μ	σ	Min	Max	
Assisted ambulant	Normal Boyle (1999)	0.71	0.34	$\mu - 1.7\sigma$	$\mu + 1.8\sigma$	1 operator¹
Assisted transported on a wheelchair²	Normal Alonso (2014,2016)	0.63	0.04	$\mu - 3.0\sigma$	$\mu + 3.0\sigma$	1 operator¹
Assisted transported on a carry or evac chair	Uniform Hunt (2012, 2015)			1.34	1.75	1 operator¹
Assisted transported on a bed²	Normal Alonso (2014,2016)	0.40	0.04	$\mu - 3.0\sigma$	$\mu + 3.0\sigma$	2 operators
Assisted transported on a hand-held rescue sheet	Uniform Hunt (2012, 2015)			0.52	1.23	2 operators
Assisted transported on a hand-held stretcher	Uniform Hunt (2012, 2015)			0.91	1.23	4 operators²

¹ An additional operator may be needed to prepare the patient for transportation or assist along the travel path

² Could be reduced to two operators only to execute the task to prepare the patient for transportation

Basic occupant profiles

Case study: staged horizontal evacuation from a hospital ward

The image displays a software interface for managing occupant profiles. On the left, a 'Profiles' list is categorized into three groups: 'Autonomous', 'Autonomous with mobility device', and 'Assisted evacuation'. The 'Autonomous with manual wheelchair' profile is highlighted in blue. To the right, the 'Edit Profiles' window for this profile is open, showing various configuration options. The 'Speed' field is circled in red, displaying a dropdown menu set to 'Normal' and a numerical value of $u=0,69 \text{ m/s}$ $s=0,35 \text{ m/s}$ [0,13 m/s, 1,36 m/s]. Other fields include Name, Description, 3D Model, Color, Priority Level, Shape, and Vehicle Shape.

Profiles List:

- Autonomous:** Active Staff, Emergency response, Visitors to in-patient or generic autonomous occupant, Visitors to in-patient or generic autonomous occupant, Workers, Autonomous in-Patients
- Autonomous with mobility device:** Autonomous with walking stick, Autonomous with crutches, Autonomous with rollator or walking frame, **Autonomous with manual wheelchair**, Autonomous with electric wheelchair
- Assisted evacuation:** Assisted Evac ambulant 1 assistant, Assisted Evac ambulant 2 assistants, Assisted Evac wheelchair, Assisted Evac chair, **Assisted Evac bed**, Assisted Evac stretcher, Assisted Evac rescue sheet

Edit Profiles - Autonomous with manual wheelchair:

- Name: Autonomous with manual wheelchair
- Description:
- 3D Model: CMan0027, CWom0028
- Color: [Green]
- Characteristics: Movement, Door Choice, Output, Advanced
- Priority Level: 0
- Speed: Normal (u=0,69 m/s s=0,35 m/s [0,13 m/s, 1,36 m/s])
- Shape: Polygon
- Vehicle Shape: Autonomous with ...
- Reduce diameter to resolve congestion
- Reduction Factor: 0,7

Basic movement groups

Case study: staged horizontal egress in health care occupancies

Movement groups for occupants having *autonomous* evacuation capabilities

2 or more Visitors to in-patients (or generic *autonomous* occupants)

2 or more Workers (not in charge of egress assistance)

1 *Autonomous* in-patient and 1 or more Visitors to in-patient

1 *Autonomous* but mobility impaired (5 categories) and 1 or more generic *autonomous* occupants

For the **assisted** profiles, it is stipulated that only one agent of that type can be put in relationship with one or more *autonomous* profiles

Movement groups for **assisted** occupants ¹

1 **Assisted** ambulant and 1 or more Visitors to in-patients (or generic *autonomous* occupants)

1 **Assisted transported on a wheelchair or evac chair** and 1 or more Visitors to in-patients

1 **Assisted transported with hand-held rescue sheet** and 1 or more Visitors to in-patients

1 **Assisted transported with hand-held stretcher** and 1 or more Visitors to in-patients

1 **Assisted transported on a bed** and 1 or more Visitors to in-patients

¹ Each group will include by default also the prescribed number and skilled assisting operators

Modeling issue in PathFinder group movements linking an *autonomous* profile with an **assisted** occupant

✓ The total number of occupants *without* being transported with a wheelchair should be independently checked issuing an error message in case of violation.

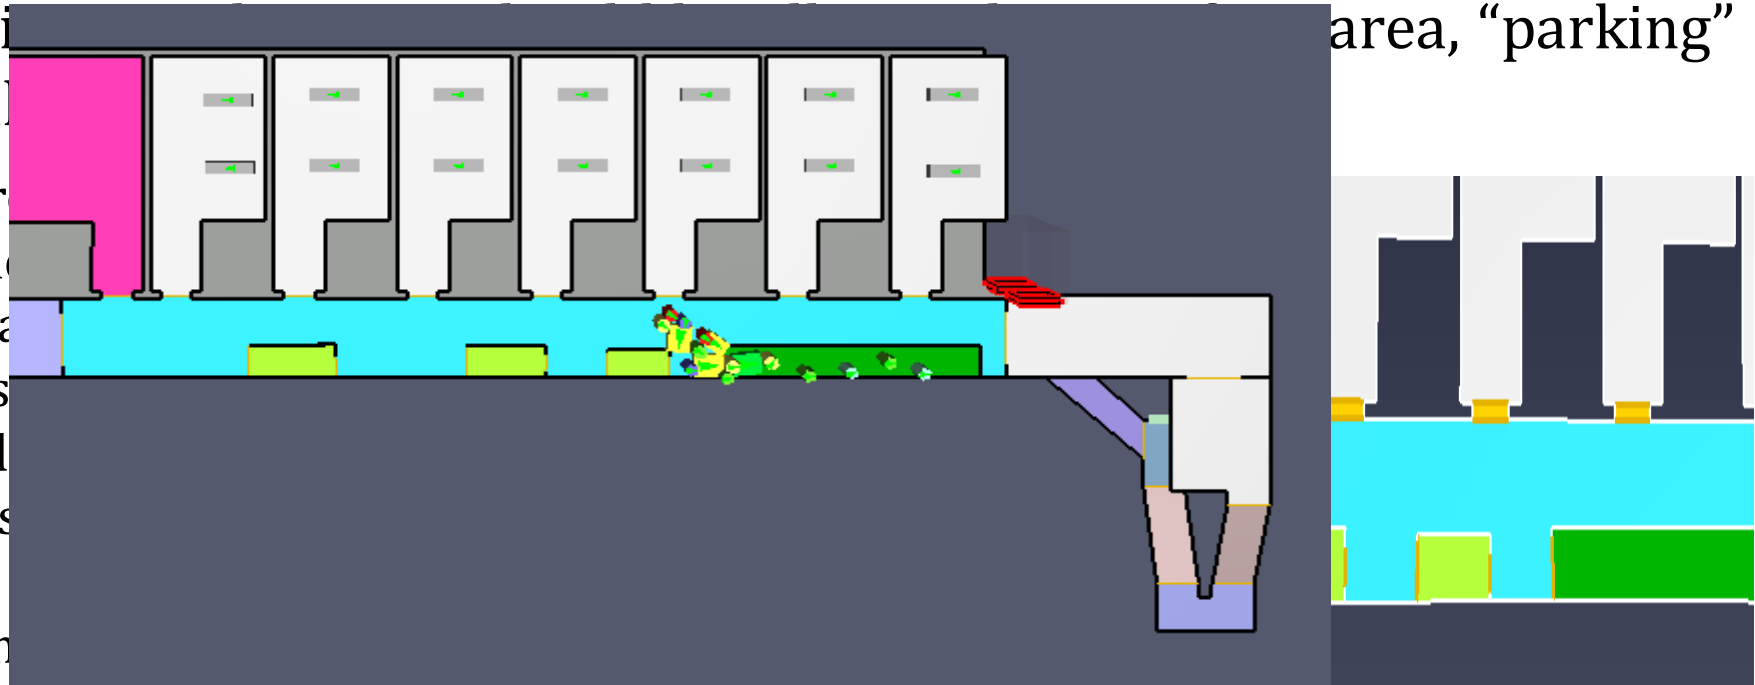

The effective number of occupants count for those incoming occupants

Modeling issue in *Refuge areas* using PathFinder (2/2)

- Recalling that *assisted* occupants do not have autonomous movement capability, they remain in the refuge in the position where they are left by the *assisting* team and can unduly impede the entering of other occupants following them or limit the space availability if not correctly oriented.

- ✓ If mobility zones should be defined in the refuge area, “parking” zones should be defined. Relocating area may be defined by defining a space for the mobility system. Two virtual doors for refuge access through the assistants can be defined without remaining unduly entrapped.

Case study: Progressive horizontal evacuation of a hospital ward

Statistic	RSET (s)
Mean	643
Std. deviation	35
Minimum	581
Maximum	709

Based on 25 simulations

Conclusion and future research work

- There is a need to include assisted evacuation not only when dealing with health care occupancies.
- Assisted evacuation simulation can be a valuable tool helping to identify in advance critical issues relating to the adequacy of the staff and of the procedures adopted in emergency planning.
- The model should be calibrated with site specific data.
- Implementation in the NetLogo platform has the potential to extend our actual modeling capabilities concerning :
 - ✓ space occupancy when mobility devices are considered
 - ✓ way finding adapting to environmental conditions
 - ✓ behavioural rules
 - ✓ occupants fatigue
